As an expert in reading theory Brillhart explains how reading to the unborn child provides a great advantage for the child. Continuing to read to the newborn can have valuable assets besides the academic advantage the child will have. A major benefit is the bonding with the parent(s) which he discusses.

As an award winning photographer Brillhart has authored two children's books with his photographs and is working on several more books in the series to help parents create interest in reading and nature. His books follow his CAMIL learning methodology. **C**uriosity gets **A**ttention, then **M**otivates, so when **I**nvolved, **L**earning takes place.

“The Mystery at the Birdfeeder” (Out of print. New printing coming soon.)

“The Deer with the Purple Nose” (Available on Amazon, B&N online)
